Prachi Lawand

Total Exp: Internship (Sept 2026 – Present)
Ph: (+91) 8857055264
Email: prachilawand540@gmail.com
Location: Pune, Maharashtra | LinkedIn | GitHub

Professional Summary:

Aspiring DevOps & Cloud Engineer and Computer Engineering student (graduating 2027), currently working as a Cloud & DevOps Intern, targeting entry-level DevOps Engineer, Cloud Engineer, and Linux Administrator roles. Hands-on experience with AWS, Ubuntu Linux, Bash/Shell Scripting, Nginx, Cron, CloudWatch, SNS, Git/GitHub, Docker and CI/CD. Built infrastructure and Linux administration projects involving monitoring, automation, alerting, service recovery and troubleshooting.

TECHNICAL SKILLS:

Operating systems	Ubuntu Linux, Linux/Unix Administration
Scripting Languages	Bash, Shell Scripting, Python
Web/ Application Server	Nginx
Devops Tools	Git, GitHub, Docker, Jenkins, CI/CD Pipelines, Cron, systemctl
Cloud Platforms	Amazon Web Services (EC2, S3, IAM, RDS, VPC, CloudWatch, SNS)
Databases	MySQL, PostgreSQL, Redis
Monitoring Tools	AWS CloudWatch, Amazon SNS, Prometheus, Grafana
Troubleshooting	Docker logs, API/server troubleshooting, Linux log analysis
Cloud Cost Optimization	AWS cost and usage analysis, idle/oversized resource identification
Concepts	Infrastructure as Code (IaC) concepts
Networking	TCP/IP, DNS, HTTP/HTTPS, OSI Model, IP Addressing, Network Troubleshooting
Programming Languages	Core Java, Python

Professional Experience:

Organisation-1
Company: Welldone Healthcare Private Limited Sept 2026 - Present
Designation: Cloud & DevOps Intern

Roles and Responsibilities:

On Linux: -

- Administered Ubuntu Linux servers on AWS EC2: service management, log analysis, user and file permissions, and troubleshooting.
- Managed services with systemctl and monitored processes, disk usage and system logs to diagnose and resolve server issues.
- Configured and maintained Nginx web servers on Ubuntu, including service restarts and configuration troubleshooting.
- Wrote Bash scripts and Cron jobs to automate routine maintenance such as health checks, backups and log archiving.
- Managed user accounts, groups and file permissions to maintain secure access to servers.

On AWS Cloud: -

- Set up infrastructure monitoring and alerting to track server health and resource usage (CPU, memory, disk), enabling proactive issue detection.
- Configured Amazon CloudWatch alarms with Amazon SNS email notifications for EC2 status checks and infrastructure alerting.
- Worked with AWS services including EC2, S3, IAM, RDS and VPC to support the application's cloud infrastructure.
- Analyzed cloud usage and billing to identify idle and oversized resources and recommend cloud cost optimization measures.

- Troubleshot EC2 instance and application availability issues using CloudWatch metrics and logs.

On Devops: -

- Sole owner of DevOps for the company's healthcare application, managing cloud infrastructure, deployments and system reliability on AWS.
- Managed source code and collaboration using Git and GitHub, working directly with the engineering lead.
- Used Docker to run containerized applications and analyzed Docker logs to troubleshoot container and API issues.
- Supported CI/CD workflows using Jenkins and GitHub to automate application build and deployment.
- Improved system reliability by combining monitoring, alerting and auto-recovery scripts and troubleshooting API and server issues.

Projects:

AWS EC2 Auto-Healing Web Server

AWS EC2 • Ubuntu Linux • Bash • Nginx • Cron • CloudWatch • SNS • Git • GitHub

- Deployed and configured an Nginx web server on AWS EC2 using Ubuntu Linux; managed service lifecycle and troubleshooting with systemctl.
- Developed a Bash health-check and auto-recovery script scheduled with Cron every 5 minutes to monitor Nginx and automatically restart the service when inactive.
- Configured Amazon CloudWatch EC2 StatusCheckFailed monitoring and alarms with Amazon SNS email notifications for infrastructure alerting.
- Performed failure simulation, service recovery and availability testing by intentionally stopping Nginx and validating automated recovery.

Linux Server Automation Toolkit

Linux • Bash/Shell Scripting • Cron • System Administration • Git • GitHub

- Engineered a menu-driven Bash automation toolkit for user account management, backups, disk-usage monitoring, log archiving and system health reporting.
- Automated recurring maintenance using Cron and documented installation, configuration, execution and troubleshooting steps in a reusable README.
- Applied Linux administration concepts including file permissions, process management, disk management, log management and monitoring.

Education:

Bachelor of Engineering — Computer Engineering 2023 – 2027

Zeal College of Engineering and Research, Pune | SGPA: 9.00 / 10.00

Certifications:

- Java Certification — C2W
- Cloud & DevOps Mastery Bootcamp — ExLearn Technology
- Deloitte Cyber Job Simulation — Forage (Sept 2026)
- AWS Certified Cloud Practitioner — In Progress
